

ABSTRACT

The text part of the bachelor's thesis contains: 73 pages, 24 figures, 3 appendices, 1 table and 15 sources.

The purpose of the work is to develop the ITS website and consider it as a source and receiver of information, building and organizing the interaction of site users: visitors, content managers, web designers and administrators, their role and organization.

In today's world, the Internet occupies a significant part of everyone's life, so neglecting to promote their services or products online becomes absurd. This paper develops and analyzes the site of the institute as a source of information and a means of providing the desired results to the user in different modes of operation.

Keywords: CMS, Drupal, FTP, content management system, information source, information flow.
